Art Unit: 1646

DETAILED ACTION

Election/Restrictions

1. Applicant's election of Group I in Paper No. 6 is acknowledged.

Claims 10-15 and 18-30 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 6.

Claims 1-9 and 16-17 are under examination in the instant office action.

Specification

2. The use of the trademarks has been noted in this application, see page 9, line 6 and page 11, line 13, for example. It should be capitalized wherever it appears and be accompanied by the generic terminology.

Although the use of trademarks is permissible in patent applications, the proprietary nature of the marks should be respected and every effort made to prevent their use in any manner, which might adversely affect their validity as trademarks.

Claim Objections

3. Claims 4-6 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form.

Art Unit: 1646

Claims 4-6 are directed to a composition comprising $A\beta$ polypeptide linked to an antibody comprising different antibody fragments. Due to the use of "comprising language", claims 4-6 cover the same subject matter as claim 3, from which they depend and which is directed to a composition comprising $A\beta$ polypeptide linked to an antibody comprising all the different fragments.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

- 4. Claims 1-9, 16 and 17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 5. Claim 1 recites the limitation "an amyloid β (A β) polypeptide" followed by the recitation "said A β polypeptide". There is insufficient antecedent basis for the limitation "A β polypeptide" in the claim. Applicant is advised that recitation of "A β (amyloid β) polypeptide" or "A β polypeptide" at first appearance of the limitation in the claim would obviate this ground of rejection.
- 6. Claim 7 is vague and indefinite for recitation of an antibody that "has <u>specific</u> binding affinity", emphasis added. The metes and bounds of the recitation cannot be determined from the claim or the instant specification because it is not clear if the specificity is defined by binding to a specific epitope, or to a protein from a particular species, or both.
- 7. Claims 2-6, 8, 9, 16 and 17 are indefinite for being dependent from indefinite claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 8. Claims 1-6, 16 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Saito et al., 1995 (PNAS, Vol.92, pp.10227-10231).

Claims 1-6, 16 and 17 are directed to a composition comprising $A\beta$ polypeptide linked to a non- $A\beta$ polypeptide. Saito et al. describe a composition comprising $A\beta^{1-40}$ polypeptide linked to the OX26 monoclonal antibody to the rat transferring receptor (see abstract and section Material and Methods on page 10227). This composition comprised a pharmaceutically acceptable carrier because it was used in the intravenous injection (page 10228, Intravenous Injection Technique). Furthermore, the monoclonal antibody of Saito et al. comprises all the fragments recited in claims 4-6, absent evidence to the contrary. Thus, publication of Saito et al. anticipates claims 1-6 and 16-17 of the instant invention.

9. Claims 1 and 3-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Majocha et al. (US Patent 5,231,000, reference AA of the IDS of Paper No. 4).

Claims 1, 3 and 7 are directed to a composition comprising $A\beta$ polypeptide linked to non- $A\beta$ polypeptide, wherein said non- $A\beta$ polypeptide is an antibody with specific biding affinity for amyloid. Majocha et al. disclose antibodies to amyloid polypeptide (A4 amyloid, which corresponds to $A\beta$ polypeptide, residues 1-26, see Figure 1 of the Majocha et al. document and

Page 5

Art Unit: 1646

compare to the SEQ ID NO: 1 of the instant invention). Antibodies of Majocha et al. were used to immunostain amyloid in AD brain section (column 9, lines 43-64) as well as parenchymal deposits of amyloid (column 10, 12-15). Thus, Majocha et al. disclose a composition comprising $A\beta$ polypeptide, a constituent of amyloid plaques, linked to an antibody with specific affinity to amyloid. Because $A\beta$ polypeptide of the instant invention encompasses "naturally occurring human $A\beta$ polypeptide" (see page 4, lines 9-10 of the instant specification), disclosure of Majocha et al. meets the limitations of claims 1, 3 and 7. Document of Majocha et al. further anticipates claims 4-6 because the antibodies disclosed therein comprise all the fragments recited in claims 4-6. Furthermore, antibodies used in Majocha et al. document were labeled with a detectable label, such as a radioisotope or "other suitable labels for binding to the antibodies" (column 3, lines 55-68 going to column 4, lines 1-17), which encompasses a contrast agent, for example. Therefore, Majocha et al. anticipate claims 8-9 of the instant invention.

Conclusion

10. No claim is allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Olga N. Chernyshev whose telephone number is (703) 305-1003. The examiner can normally be reached on Monday to Friday 9 AM to 5 PM ET.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yvonne Eyler can be reached on (703) 308-6564. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Art Unit: 1646

Certain papers related to this application may be submitted to Technology Center 1600 by facsimile transmission. Papers should be faxed to Technology Center 1600 via the PTO Fax center located in Crystal Mall 1 (CM1). The faxing of such papers must conform with the notices published in the Official Gazette, 1156 OG 61 (November 16, 1993) and 1157 OG 94 (December 28, 1993) (see 37 C.F.R. § 1.6(d)0. NOTE: If Applicant *does* submit a paper by fax, the original signed copy should be retained by Applicant or Applicant's representative. NO DUPLICATE COPIES SHOULD BE SUBMITTED so as to avoid the processing of duplicate papers.

Official papers filed by fax should be directed to (703) 872-9306. If this number is out of service, please call the Group receptionist for an alternative number. Faxed draft or informal communications with the examiner should be directed to (703) 308-7939. Official papers should NOT be faxed to (703) 308-7939.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0196.

Olga N. Chernyshev, Ph.D.
